P2MP

Point to Multipoint

Everstream's Point-to-MultiPoint service eliminates the need for you to manage a Virtual Private Network (VPN) connection. With our P2MP, your business can connect three or more geographically dispersed sites — allowing each to communicate with one another as well as a data center or colocation facility of your choice. Everstream's high-speed fiber connection is flexible, scalable and customizable to meet your needs today and in the future.

FASTER FIBER. BETTER BUSINESS.

Point to Multipoint | P2MP

A **Point-to-MultiPoint (P2MP)** circuit connects three or more separate points. Ideal for customers with two or more locations, this solution ensures multiple points are able to communicate seamlessly as one cohesive network. Our P2MP connection has Layer 2 VPN and Layer 3 VPN availability with untagged, tagged and routed options. Everstream also supports OSPF, IS-IS, iBGP and eBGP protocols.

- Multi-site customers

- Customized solution

- Replaces VPN management
