V-DIA

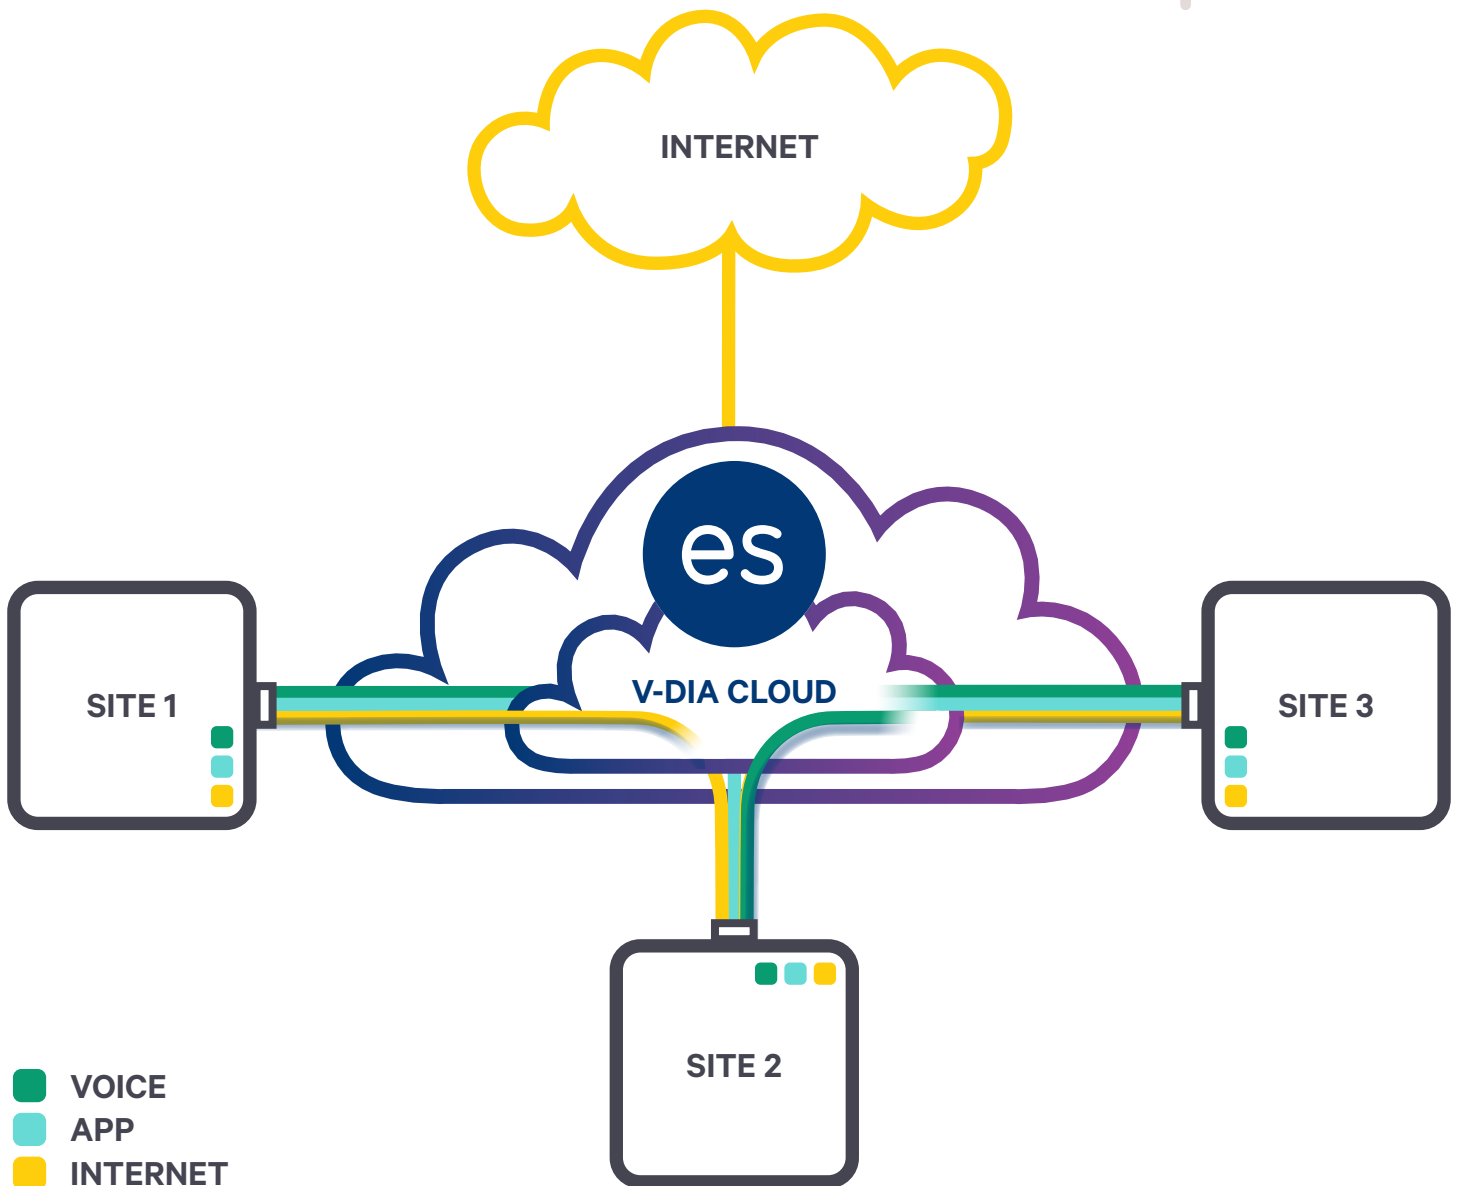

## Virtual Dedicated Internet Access

Multi-site businesses often struggle with IP management and efficient utilization of their bandwidth. With Everstream's Cloud-based Virtual Dedicated Internet Access, your business has one, shared public IP address that can be used for all locations — eliminating the hassle and inefficiency of administering and managing multiple IP addresses for multiple sites.

FASTER FIBER. BETTER BUSINESS.

# Virtual Dedicated Internet Access

# V-DIA

**Virtual Dedicated Internet Access (V-DIA)** delivers the same core features and reliability as DIA. Ideal for customers with multiple locations, a V-DIA connection allows a business to communicate among its multiple sites with increased throughput. It functions as a private, independent network such that each location is independent of the others. Everstream's V-DIA option provides network redundancy, Multiprotocol Label Switching (MPLS) redundancy as well as the flexibility to manage and customize IP assignments.

- IP management

- High-speed service

- Secure connection
