

# Everstream Fiber: Connectivity to Complement Your Care

Research suggests that 30% of all the data existing in the world belongs to the health care industry — from diagnostic imaging and electronic medical records to telemedicine and wearable monitoring devices. And all of it needs to be immediately accessible to provide patients with the best care possible.

At Everstream, we understand the health care industry. Milliseconds matter to us, too.

From neighborhood clinics to the nation's top-rated health systems, our all-fiber, low-latency Business Fiber Network can prioritize an MRI while accommodating non-clinical network traffic. Seamlessly.

Plus, with Everstream's no-charge bandwidth bursting, you'll always have capacity when you — and your patients — need it most.

## THE EVERSTREAM DIFFERENCE

### Connectivity

With comprehensive data center connectivity at 100-Gigabit speed, Everstream's network is capable of accommodating converged internet, voice and data services — without sacrificing security or architectural flexibility. The foundation of our core network is fiber-ring architecture, providing diversity and reliability.

### 24/7 Customer Support

Our Network Operations Centers in Cleveland, Ohio, and Lansing, Michigan, are staffed by highly trained engineers, who provide 24/7/365 support with one phone call. NOC engineers monitor, manage and maintain visibility and control over the entire network to ensure it is operating at peak efficiency.

### Redundancy and Replication

Everstream's network offers backbone redundancy, utilizing a combination of DWDM and direct fiber links. The resulting self-healing fiber rings ensure your service remains operational at all times. Everstream also offers basic latency SLAs for storage replication that align with the industry's EMC standard of less than 4 milliseconds for real-time replication.

### Direct Peering

Everstream offers cloud direct peering connections to help customers manage increases in bandwidth and network traffic. Our customers have direct access to Adobe, AWS, Microsoft Azure, Google, Netflix and others, which reduces latency, naturally increases throughput and ensures that your internet connectivity is not impacted by routine usage.

### Rich Dugger, Everstream Sales Director

440.382.1212 | [rdugger@everstream.net](mailto:rdugger@everstream.net)

With 20 years in the industry and 13 years as a Sales Director with Everstream, I have helped countless Northeast Ohio businesses find solutions to their telecom challenges. Specifically, I have delivered customized fiber solutions to a range of health care providers, including specialty and community hospitals as well as regional and national health care systems.

At Everstream, we see our customers as partners. Whether you require a single redundant network connection, a comprehensive solution or even dark fiber, we will work with you to develop a result that meets your needs.

As Everstream's exclusive health care contact, I understand your industry and would welcome the opportunity to determine how we can earn your business. Let me prove why your health care facility belongs with the Business Fiber Network.
