FASTER FIBER. BETTER BUSINESS.®

MANAGED SD-WAN

Get the Most Out of Your WAN

A critical piece of the cloud-first puzzle, SD-WAN optimizes and secures data access and transmission across distributed locations and applications. Since its emergence within the past decade, enterprise IT leaders have embraced this technology to monitor and optimize performance of their WAN. Enterprise adoption of SD-WAN has experienced a continued, double-digit growth in demand as IT leaders seek to attain the promises of the technology. However, many have learned their organizations lack the specialized skills and resources to effectively implement and manage a successful deployment.

Solution Details

The Everstream Managed SD-WAN offering combines our technical expertise with a next-generation SD-WAN platform from Palo Alto to deliver a robust enterprise network that is customized to your needs. And when you combine Everstream's all-fiber network with the Managed SD-WAN offering — monitored and supported by our 24/7 Midwest-based NOC — you can take your network performance to new heights.

With Everstream's hybrid approach to Managed SD-WAN, you gain the control and flexibility you need over your network without the burden of design, configuration, installation and ongoing monitoring for your IT staff. We will build, deploy and monitor your WAN. You can then direct Everstream to make changes on your behalf to:

- Provide protected access to cloud applications for distributed, remote workforces — allowing your employees to securely work from anywhere.
- Intelligently direct traffic on the most efficient path.
- Prioritize applications based on business requirements.
- Fully encrypt data from source to destination.

Additionally, the Managed SD-WAN solution creates a path for utilizing ExpressRoute to deliver direct connections to Microsoft Azure, Amazon Web Services and other public cloud services.

By serving as your network connectivity and managed services provider, Everstream extends end-to-end visibility — and control of — your network. Whether your requirements call for centralized WAN management, improved traffic routing or streamlined cloud access — we understand that performance and reliability are essential to your business operation – and make it our job to deliver it.

Top Benefits

- Industry-leading equipment, maintained with the latest manufacturer's updates.
- Access to top networking talent to design, configure, install and monitor your WAN with software-defined networking.
- Enhanced security with end-to-end encryption.
- Improved network performance with intelligent traffic routing.

Key Features

- Fully managed SD-WAN solution featuring Palo Alto hardware.
- Cloud-based Palo Alto dashboard.
- 24/7 up/down and network health monitoring and alerting.
- Maintenance including changes and manufacturer's updates.
- VPN access for remote workforce.

About Everstream®

Everstream has raised the bar for business connectivity, delivering a business-only fiber network with the speed, reliability, scale and performance that today's enterprises demand. With more than 27,500 route miles of fiber and speeds up to 100 Gbps, Everstream's enterprise-grade network delivers robust business fiber services, including internet, WAN, data center connectivity and dark fiber. Through its "Do What You Say You Will Do" approach, Everstream is a valued partner dedicated to the success of business customers. For more information, visit **everstream.net**.
